Art Unit: 1623

Applicant's election without traverse of Group I, claims 1-13 in the reply filed on October 19, 2006 is acknowledged. Upon further consideration, claim 19 is deemed to belong in Group I since it encompasses nothing more than a compound of Group I and a carrier.

Claims 14-18 and 20-42 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on October 19, 2006.

Claims 1-13 and 19 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for the compounds set forth on page 17 of the specification, does not reasonably provide enablement for any aglycone core linked to an unlimited number of oligosaccharides at an position and linked to any cationic group at any position. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention commensurate in scope with these claims.

A conclusion of lack of enablement means that, based on the evidence regarding each of the factors below, the specification, at the time the application was filed, would not have taught one skilled in the art how to make and/or use the full scope of the claimed invention without undue experimentation.

(A) The breadth of the claims.

The claims encompass a vast number of compounds having various structural formulas.

(B) The level of predictability in the art.

A person having ordinary skill in the art at the time the claimed invention was made would not have been able to predict which specific compounds, among an enormous number of diverse compounds claimed, will have the desired utility.

(C) The amount of direction provided by the inventor.

The inventor has not provided any direction on how to make and use compounds encompassed by the claims, with the exception of the compounds having structural formula as set forth on page 17 of the specification.

(D) The existence of working examples.

The working examples are limited to the preparation and use of compounds described on page 17 of the specification.

(E) The quantity of experimentation needed to make or use the invention based on the content of the disclosure.

Because there is no way to predict a priori which compounds will be active from the vast number of compounds claimed, an extraordinary amount of trial and error experimentation is required to identify the active compounds.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8, 11-13 and 19 are rejected under 35 U.S.C. 102(b) as being anticipated by Marciani (U.S. Patent No. 6,080,725).

Art Unit: 1623

Marciani discloses the claimed compounds (see, for example, compound of Formula (II), in columns 12-13).
